Innovation & Quality: New Options for Take-Off

TRIOSIM
CORPORATION

Go Further with Triosim

Triosim offers a complete range of solutions for effective and efficient sheet take-off. Options are available that will meet today's production demands, while offering the flexibility you need to meet your mill's changing requirements.

Increased Strength

Triosim's Oramac doctor blade is stronger, resulting in significantly reduced deflection along its length. Design improvements at the internal structures have enhanced rigidity, while maintaining external dimensions. The result is a blade that provides efficient and trouble free take-off, while maintaining critical clearances.

Options that Meet Your Requirements

Depending on your application, Triosim will supply hydro or pneumatic doctors, or a blade that will convert as your processes or production requirements change.

All spare parts, components and technical service are available from Triosim.

Options for Conversion

Your best solution may be to convert existing equipment. In many cases we can improve performance and modify equipment for new applications.

Quality

Triosim doctor assemblies are designed, engineered and manufactured in Vancouver, Washington, U.S.A. We monitor quality at every stage of your project and maintain standards that are unexcelled in the industry. The quality and performance of every Triosim blade is guaranteed.

Additional Take-Off Equipment

Take-off rolls and doctor/scrapper blades can be supplied new, or rebuilt to provide additional service life at a fraction of the cost of new equipment.

- Structurally enhanced doctor blades for increased rigidity
- Hydro, pneumatic or combination assemblies offered
- Conversion services available
- Take-off rolls & doctor/scrapper blades are supplied
