

Re-Line and Re-Align

New Life for Old Washer Vats

TRIOSIM
CORPORATION

Go Further with Triosim

Re-lining a washer vat is an excellent first step in maintaining the condition of your equipment. It is also the perfect time to inspect vat wall inserts and packing panels, thus assuring that the vat is returned to optimal working condition.

Keep in mind that excessive wear at the insert of the main vat can weaken the support structure for the gearcase. The implications for failure and misalignment in your washing system are serious and potentially damaging to the drum itself.

Triosim Packing Panels and Vat Inserts offer a broad range of options and materials to assure your retrofitted components will perform to your expectations.

Packing Panels and Vat Wall Inserts supplied by Triosim are custom designed to accommodate your existing equipment as well as your particular operating environment.

A range of fabrication materials are available, as well as material combinations that optimize cost savings. For example, we can provide components with cost-effective metallurgy at the non-wetted areas, as well as FRP-lined Inserts and Packing Panels fabrication.

For Repulper Vats

Triosim also supplies packing panels and inserts for use in Repulper Vats. We've included a special design feature that will allow the packing panel to be replaced without disassembly of the entire repulper screw and drive, saving you time and maintenance dollars.

Another option is an insert that allows for removal and installation of the repulper screw without removal of the washer hood.

Triosim Services

Call on us if you would like to discuss options for inspecting, re-lining, or refurbishing your vat and peripherals. We can help you with every step of your project.

- Custom designed to fit vat and peripherals
- Dual metallurgy options available to save cost
- FRP Packing Panels and FRP lined Inserts are available.
- May be supplied with special component for speedy installation on tile vats or FRP lined vats
- Vat Wall Inserts for repulper vats designed for easy maintenance
- Fit & workmanship are guaranteed by Triosim
- Journal Seal Panels provide substantial cost savings and performance benefits

Triosim offers conventional packing panels, as shown, as well as panels designed for use with Journal Seal Assemblies. Journal Seals eliminate the need for the Packing Gland and the Follower, providing substantial cost savings and significant performance benefits.
